Term Project – Video Presentation Guidelines

DASC 5420: Theoretical Machine Learning

Instructions for Video Presentation

ALL pre-recorded presentations must be uploaded on or before 12 April 2024.
PLEASE NOTE: Late submissions will not be accepted.

You can use any available tools to create the video presentation. Your presentation should be a maximum of 12 minutes. Your presentation slides should be well-documented.

Environment:
Select a room or place where you will NOT be distracted while you record. Try to avoid any sound distractions in the room where you record; avoid background music, sounds from roads, and sounds from other rooms. Also, turn off the sound and notifications on your phone and computer.

Audio:
Having a dedicated microphone will make you sound a thousand times better. That's why every presenter on TV uses a microphone of some kind. If possible, please do NOT use the built-in Laptop Microphone!

Video Requirements:
- All videos must be in **MPEG-4 format (.mp4),** ideally at 1920x1080 resolution.
- **Naming:** Files must be named using the following format:
  Group-number.mp4.
  For example: **Group-2.mp4**

Recording Your Video:
You can use any software application you wish to record your MP4 video. Some available options are listed below:
- Zoom - Recording Presentations with Zoom (PDF)
- Screencast-o-matic
- OBS Studio

After recording your talk, please rewatch it to ensure that the video and audio are recorded correctly. It's a good idea to do a short test recording first to verify that your settings are correct before investing the time to do the full presentation.
